

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for April 2019.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m³/sec.

The increased flow for the date 17th of April was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the date 24th of April was due to stops at generation, when no water was drawn to intake.
