

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP- for June 2016. The minimum permitted ecological flow of Paravani HEPP is 1,75 m³/sec.

The increased flow for the dates between 9th and 13th of June 2016 was due to seasonality effect, when total amount of water flow at the Paravani River before the regulator area is more than the maximum intake capacity of the Energy Tunnel.
