

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for April 2024.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m3/sec.

The increased flow for the dates 15 th and 30 th was due to stop at generation, when no water was drawn to intake.

The increased flow from 18th to 30th April was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity
