

The graph above shows the actual ecological flow data-the amount of water left to the Paravani River from Paravani HEPP for June 2021.

The increased flow for the dates 3rd,4th,6th and 7thof June was due to seasonality effect, when the amount of water at intake was more than the Plant's capacity.

The increased flow for the dates 5th and 14th of June was due to stops at generation, when no water was drawn to intake.

The minimum permitted ecological flow of Paravani HEPP is 1,75 m3/sec.
